# 2022 2ND SERIES TREE SCULPTURES

### Design concept

On the basis of establishing the overall growth of the tree, the three-dimensional geometric design language is refined, and the hollow shape of the leaves is used to increase the overall visual hierarchy, from the visual sense of the whole tree can be reflected in a minimalist, modern, detached from the discernment

### Design concept

Through a romantic surrealist approach, the cloud shape is used as the crown of the tree, which looks like a cloud falling on the trunk from a distance, and in recent years the cloud is part of the leaves of the crown. The curved and rounded shape of the crown forms a strong visual contrast with the geometric block of the trunk

### Design concept

based on the shape of the tree, the application of curved lines to reflect the structure of the tree's growth pattern, thus to show the tree's tenacity, through the surface treatment of Corten steel, reflecting the spirit of standing tall and tough in the years

### Design concept

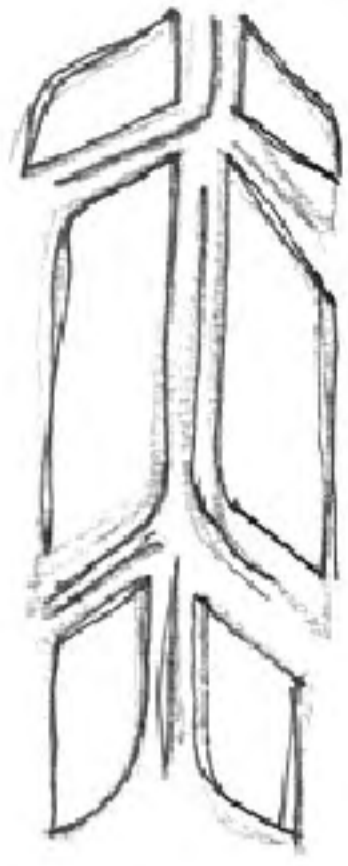

The rhombus shape is used to weave the shape of the whole tree through the gradient size of the block, the whole tree is full of modern geometric aesthetics parametric design sense, from the roots to the crown, the rhombus grows slowly and regularly, implying that the nutrients of the earth give the tree room to grow strong
