

Offer of Mi-8MTV-1 (Mi-17) helicopter
enabling implementation of round-the-clock combat capabilities

Mi-8MTV-1 (Mi-17) helicopter

- The Mi-8 is a transport helicopter of Soviet origin. It was developed in the early 1960's to provide Soviet forces with a larger capacity helicopter than the Mi-4 and more maneuverable and practical than the Mi-6. The commonly used NATO reporting name is Hip. The Mi-8 and the second generation Mi-17 are some of the most numerous and widely exported helicopters ever built. Besides its troop transport role it can be used as an attack helicopter due to its significant weapon load.

Mi-8MTV-1 (Mi-17) helicopter

The Mi-8 and Mi-17 have the ability to carry 24 troops or 12 stretchers or 4 t of cargo. It is also possible to carry 3 to 4.5 t of cargo on a sling below the aircraft.

- The two large turboshafts provide the Mi-8 with significant power. Over time various models have been used ranging from 1.481 hp each in the original version to 2.200 hp in current production models. The maximum speed is 250 km/h and the ferry range is over 900 km. The Mi-8 is very suitable for hot and high operations with its 6 km service ceiling.
