Our Supplier is the world's largest supplier of rail transit equipment with the most complete product lines and leading technologies. Its main business cover R&D, design, manufacture, repair, sale, lease and technical services for rolling stock, urban rail transit vehicles, engineering machinery, all types of electrical equipment, electronic equipment and parts, electric products and environmental protection equipment (including electric vehicles, sewage processing device, photovoltaic and wind turbine), consulting services, industrial investment and management, asset management, import and export.

Our Supplier is a key subsidiary of the world's largest rail transit equipment supplier, inherits leading innovations from the high-speed train and dedicated to developing zero-emission public transport solutions.

Our Supplier is the first clean energy commercial vehicle manufacturer in China, it expanded the core technology from railway to electric vehicles, developed motor, controller, converter system and network system,etc. It offers 5-24 meters of pure electric, plug-in, fuel cell ,diesel, Sanitation and logistic vehicles, suitable for inner-and inter-city transportation, highway, tourism and special applications.

Our Supplier has seven production bases across the country with an annual production capacity of 30,000 vehicles, 50,000 sets of electric drivetrains and 1,000,000 kWh battery packs.

A comprehensive testing system let nothing go wrong

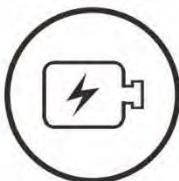

The Three-Tier Testing System is a national authorized testing system, certified by the China National Accreditation Service for Conformity Assessment (CNAS). The tests start from the very inside-parts, extending to components and complete vehicles, ensuring every product leaves the factory with no flaws.

Drive the future with a smart drivetrain system – “T-POWER6”

As the winners of the Reddot and IF Award, the T-Power series is a kind of E-drive train that drives clean energy vehicles to achieve their best performances. Launched in 2019, the 6th generation of T-Power integrated the “5G bus concept”, featuring faster operation data processing, longer lifespan, lighter weight, more efficiency in energy consumption and more importantly, safer for your passengers. The all new T-power 6 is certainly the drivetrain that boosts the vehicle's performance and brings value to your business.

Highly integrated electric drive system

Wading Safety

Normal operation on flooded road
IP68 protection level

Active Safety

Cloud 5G
AEBS emergency braking system
Lane departure warning system
Forward collision avoidance warning system

Manufacture

Smarter production line makes everything precisely right

As a major clean energy vehicles manufacturer, to meet the fast-growing market demands for high quality, quick delivery and customer-tailored products, has established a highly intelligent production system, deployed ERP, MES, PLM, CRM to make sure every piece of work is a masterpiece. In 2015 was entitled as the first batch of demonstration intelligent manufacturers by the Ministry of Industry and Information Technology of China.

Intelligent parking

Based on Changsha smart bus line in China, it adopts the technologies of single bus intelligence + Cooperative Vehicle Infrastructure System (CVIS), and cooperates with local governments to carry out smart bus operations, providing bus L3 intelligent driving demonstration solutions.

The forward design of 5-meter unmanned micro-circulation bus realizes the unmanned demonstration operations in limited closed scenarios, providing L4 automatic driving demonstration solutions.

It has obtained open road test licenses for intelligent connected vehicles (ICVs) in Changsha, Deqing, Shanghai and Chongqing in China, Paris in France and other places around the world, accumulating more than 50,000 kilometers of automatic bus driving mileage. The horizontal and vertical control in vehicle-end is the industry-leading.

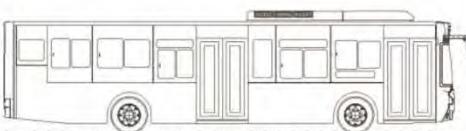

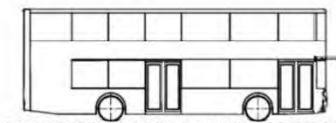

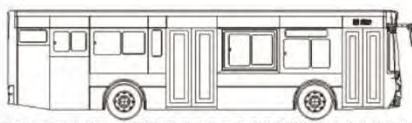

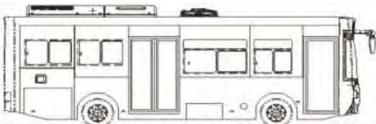

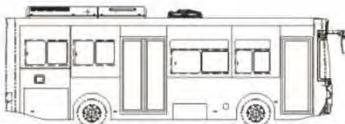

Lateral control accuracy ± 20 cm
Longitudinal control accuracy ± 50 cm

City Bus — Aluminum alloy/Stainless steel body series

With multiple variants and choices of equipment options, we can provide the perfect bus for practical different city travel requirements. You are sure to find the model to suit your practical needs. The aluminum alloy/stainless steel bodyframework helps cut the weight of the whole vehicle and provides superb corruption resistance performance.

Logistics Vehicle

Aiming at the distribution demand of agricultural and sideline market segments such as supermarkets, fresh food, furniture and vegetables, has developed new energy logistics vehicles, including 17 square hydraulic braking light load vehicles and 19 square pneumatic braking heavy load vehicles.

Taking advantage of "three electricity" advantages, it will further create differentiated 4.5t light truck products with characteristics. Promote the sales of new energy logistics vehicles through platform operation.

Product

Electric Chassis

Sit on stronger foundations

Well thought out design with excellent production processes, offers a ready-to-go chassis that lays a solid foundation for a safe and comfortable drive and passenger experience.

After-sales Service

Central Storehouse of Spare Parts

By establishing a local spare parts center overseas, we can ensure that the required spare parts are delivered within 24 hours.

Training Service

By providing professional training for drivers and maintenance personnel, our company can help customers fully understand the operation of vehicles and provide a guarantee for vehicle safety.

Remote Information Service

Through the intelligent vehicle management platform, under the premise of ensuring safety, remote control of vehicles, including remote start, remote preheating, remote diagnosis and remote system upgrade services.

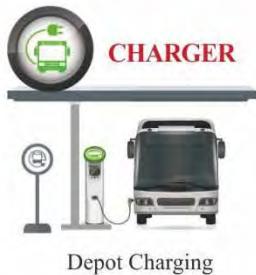

Localized Service

By cooperating with overseas automakers to realize the localized after-sales maintenance of vehicles, the time required for troubleshooting does not exceed 72 hours.

Remote Monitoring

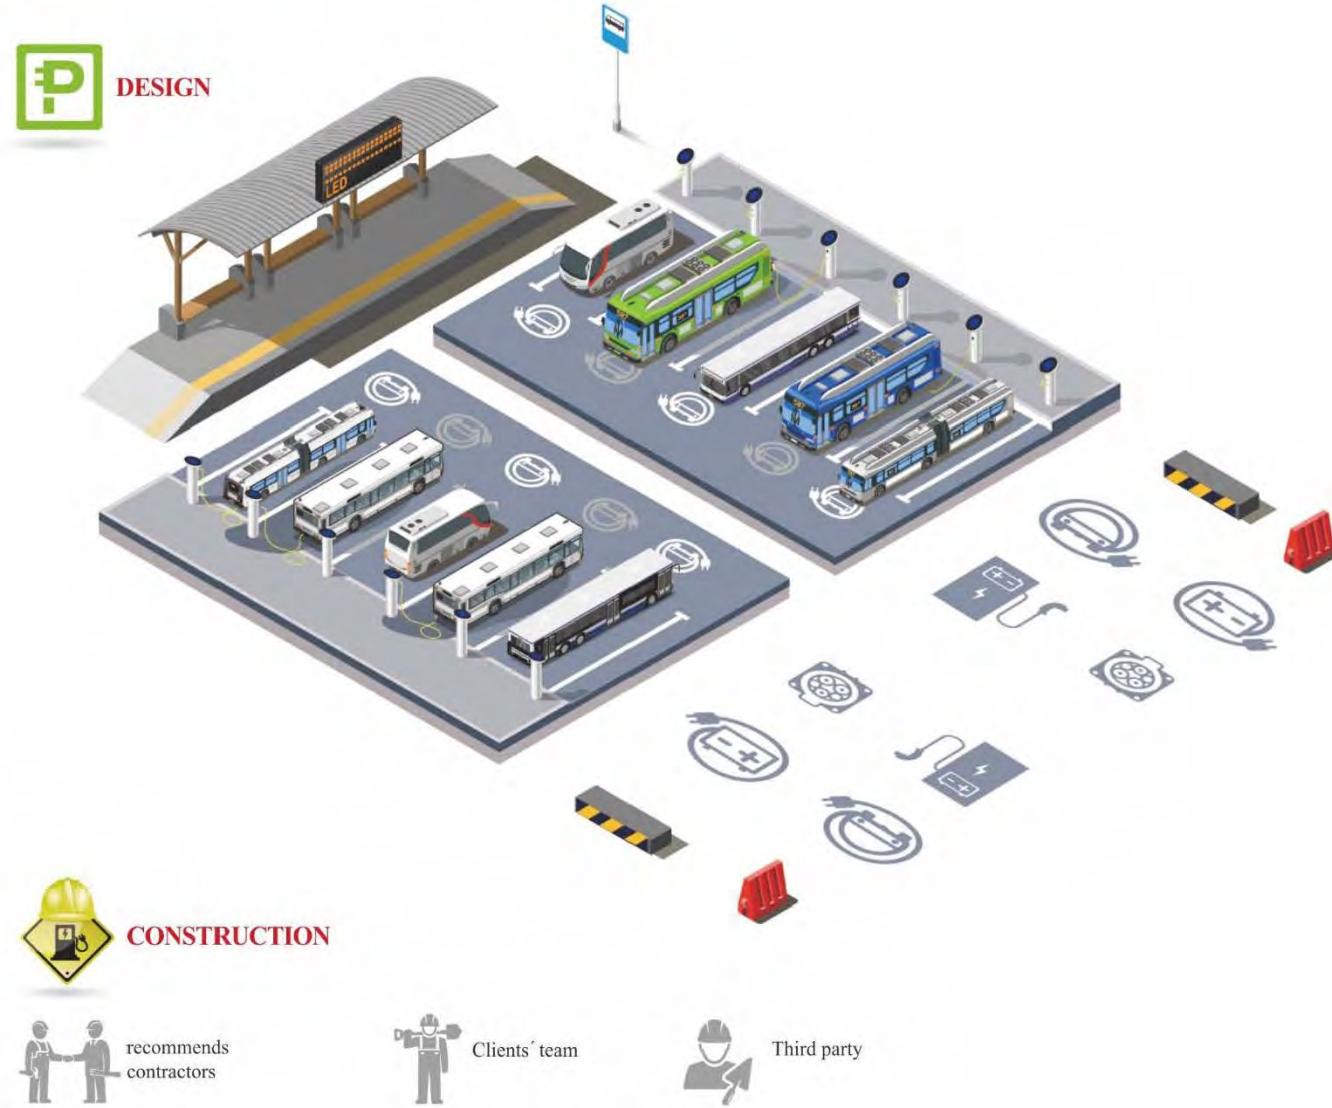

Through the intelligent vehicle management platform, real-time monitoring of vehicle operating conditions, timely grasp of vehicle operating conditions, energy consumption, and other key information, greatly improve the convenience and efficiency of vehicle operation management.

Charging Solution

Pantograph Charging

In order to make the deployment of E-buses easier, offers thoughtful suggestions, making charging as flexible as you want, including multiple charger options, charging infrastructure layout design so on so forth.

Case

Underpinned on the well-established industrial chain and abundant experience, offers a very flexible business cooperation model to its clients worldwide. By associating with conventional bus manufacturers, helps to localize the production of E-buses by supplying chassis, powertrain systems, etc. This could boost local economy, create more jobs and benefit local communities.

Hungary: By collaborating with and realizing localized manufacturing, a high-end product for the EV market was produced.

5.3 meter pure electric bus (low capacity vehicle)

The 5.3 meter new model pure electric minibus is suitable for residential areas and industrial parks with good road conditions.

- The wheel base of 5.3 meter minibus reaches 7-meter-bus standard, **Large interior space**.
- Low entrance ensure convienience
- Reasonable layout, **can carry 19 passengers**
- 2.38-meter height, **excellent stability and passability**.

>> 5.3 meter pure electric bus (low capacity vehicle)

Humanized interior design:

Enveloping instrument table, rotary gear switch and other design, to provide drivers with a humanized driving environment

Integrated equipment box:

Cozy, beautiful and easy to test&maintain

One-piece construction roof:

More beautiful and practical

Interior light design: Top surround atmosphere light, ring light LED ceiling light, to create a comfortable riding environment

Floating handrail bar: Easy to clean improve the efficiency of personnel through, easy for passengers to grasp

Separate driver driving area: Safe and modern design let the driver enjoy driving

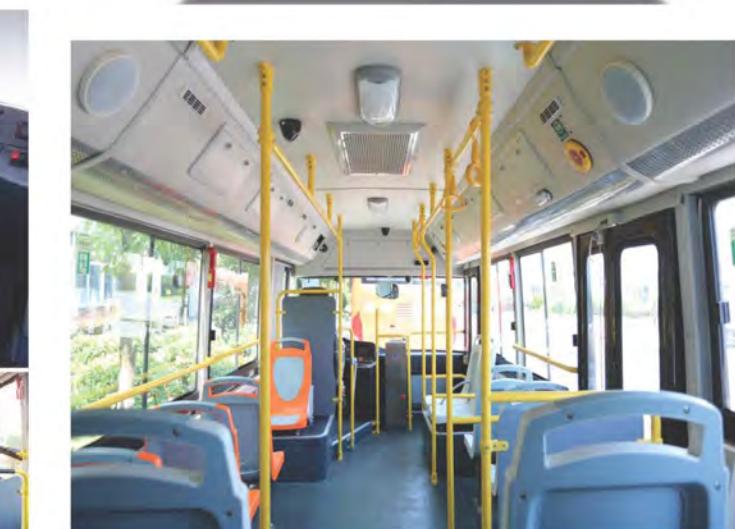

>> 5.3 meter pure electric bus (low capacity vehicle)

Model TEG6530BEV		
Overall dimension (mm)		5330*1999*2380
Wheel base (mm)		3500
chair		9+1
Total mass (kg)		5000
Approach angle/departure angle (°)		13/22
project		Technical configuration parameters
Electric drive and control system	Drive motor	Permanent magnet synchronous motor, peak power (kW)/peak torque (N.m): 105/320
	Energy storage device	Lithium iron phosphate battery, 70.18kWh
	Motor controller	Integrated controller
chassis	suspension	Few leaf spring
	Front axle	2.2T
	Rear axle (axle)	2.8T
	tyre	215/75R17.5
	Rim	six×17.5 (aluminum alloy)
body	braking system	With energy storage spring braking, electric transmission auxiliary braking, ABS anti lock, dual circuit air braking
	Passenger door	Pneumatic double external swing door, middle door
	Interior	Aluminum alloy decorative plate, with atmosphere light
electrical	Air conditioner model	Front and rear double evaporators, inner roof installation, single cooling
Other configurations		Full load bearing, cage body, steel stamping outer covering, combined headlights on the front wall

>> 6 meter pure electric bus (low capacity vehicle)

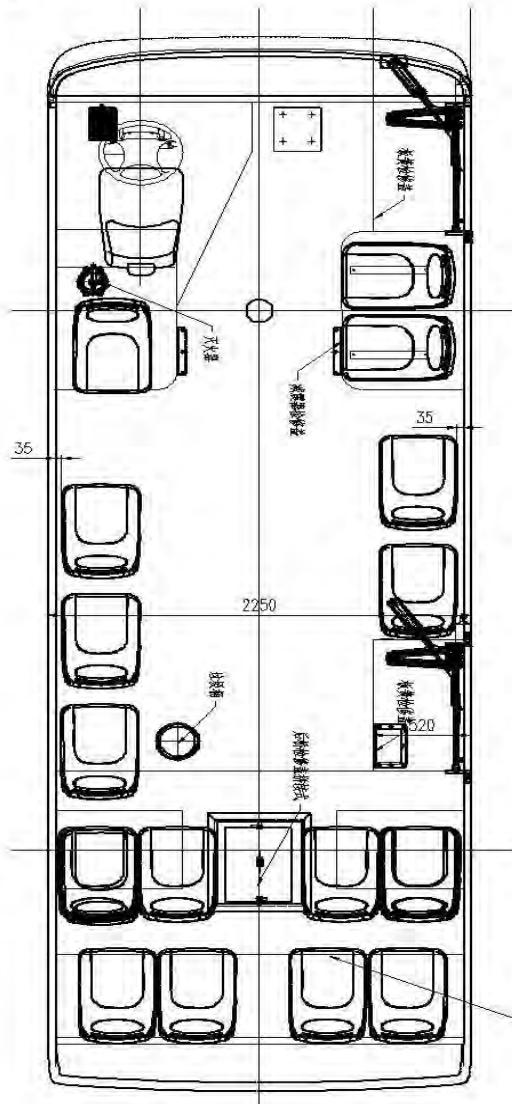

The new 6-meter pure electric city bus is applicable to small cities.

➤ Shanghai 18-meter BRT Project Introduction

This pure electric BRT vehicle was designed with respect to the European standards, featuring "high value" , "high quality" and "zero emission" service, ensuring the requirements of Shanghai Expo and serving the multi-level and diversified travel needs of the majority of people in Shanghai.

Guangzhou 18-meter BRT Project Introduction

This 18-meter BRT bus, incorporates the characteristics of urban travel in Guangzhou, and features large space, high passenger capacity, comfortable ride, and elegant appearance. Currently more than 100 units of this model has been manufactured.

>> Highway Vehicle Product Solutions

In order to fully meet the needs of long, medium and short distance passenger transport, intercity passenger transport, rural passenger transport and other market segments, Electric has continued the exquisite European technology.

Starting from the characteristics of different market segments and user needs, it has developed large, medium and small pure electric and traditional road buses with different lengths, covering 9 to 12 meters in length.
