

H125 PACKAGE

The H125 helicopters proposed in this package are available from stock and have been purchased new in 2024 as civilian helicopters. They only have 5 hours Total Time Since New and they are ready to ship without any delay anywhere in the world.

These H125 are practically new and still under the warranty of the manufacturer and, on demand, they can be supplied with Power by the Hour, logistic assistance, delivered on site, pilot training, and engineering training.

In comparison to the Fennec 550 the 2024 H125 are fitted with the new engines which are 25% more powerful than the engines fitted in the Fennec 550 and the H125 have the new Aluminum Cabin with unlimited life which replaces the heavier fiberglass life limited cabin of the Fennec 550 and previous models AS350. This making these H125 more attractive from the performance being lighter and more powerful, and from the maintenance point of view.

Standard equipment includes Garmin G500 TXi, GTN 650Xi, GNC 215, GTX 345R (ADS-B In/Out), INTEGRA AP-H, ELT plus Enhanced Engine Air Particle Separator, Engine Flushing Device (no cowling removal), Pilots Windshield Wiper, Dual Controls, and a Left-side two-position from bench seat (pilot on right).

They will be fitted on site with Standard Mission Equipment like night vision capability, Garmin avionics with the proper cartography, stabilized FLIR system integrated in the helicopter's cockpit, hard points and lateral gunner position equipped with Minigun in .308. More systems can be provided on demand.

All systems will need proper export and import approvals and licenses; all applicable laws and rules apply.
